

Eligibility

The ARC Pilot is open to all K-12 schools and select nonprofit facilities that provide emergency services and house the disadvantaged and homeless.

Customer benefits

- Improves indoor air quality
- Reduces energy use
- Helps manage utility costs
- Enhanced rebates for participation

Rebates

- Advanced rooftop control with VSD: \$300/ton
- Outdoor air economizer: \$75/ton*
- Energy management system: \$0.25/square foot*

*Must be installed in conjunction with the new VSD.

We Can Help

Advanced Rooftop Control (ARC) Pilot

Easy Ways to Save

When you operate your HVAC equipment using advanced rooftop controls, your facility can better manage utility costs and improve indoor air quality. APS Solutions for Business makes it easy to lower operating costs and reduce energy use with the following program offers.

Advanced Rooftop Control with VSD

Improve the efficiency of your HVAC system by retrofitting your rooftop units with variable speed drives. The VSD allows for varied on/off operation depending on when the HVAC system calls for cool air, reducing run time and energy costs.

Eligible APS customers can receive an enhanced rebate for implementing an advanced rooftop control with VSD.

Plus, receive additional rebates for installing an outside air economizer with carbon dioxide (CO₂) sensor or installing an energy management system (EMS) in conjunction with your ARC project.

Outside Air Economizer

Economizers allow HVAC system dampers to open, using outdoor air (free air) when the outdoor temperature can meet the cooling need.

Reduce energy use and improve indoor air quality when you retrofit constant air dampers with modulating dampers using a CO₂ sensor. The upgraded system determines whether to use recycled indoor air or fresh outdoor air throughout a cooling cycle.

When combined with your ARC equipment, eligible APS customers can receive an enhanced rebate for adding an outside air economizer.

Energy Management System

Control various HVAC system components in a central hub for greater equipment oversight and better energy management.

When combined with your ARC equipment, eligible APS customers can receive an enhanced rebate for adding an EMS.

How It Works

APS Solutions for Business just made saving energy and money easier. Our Advanced Rooftop Control Pilot gives eligible K-12 schools and select nonprofits a rebate when you purchase eligible HVAC equipment.

It's as easy as 1-2-3.

1. Select a contractor that specializes in ARC equipment.
2. Purchase eligible HVAC equipment, submit a pre-application and have the equipment installed.
3. Submit the final application and receive your rebate.

Find a participating Trade Ally and access the ARC application at apsapplynow.com.
