

Project Snapshot: Chino Valley Unified School District

Chino Valley Unified School District utilized the Advanced Rooftop Control (ARC) pilot to upgrade their schools' HVAC systems with better equipment and controls.

“The ARC pilot is a great resource for school districts that don't have funding to update or install a new system that offers better control of equipment,” states Chris Sheriff, Chino Valley Unified School District Facilities Director.

Three energy-saving projects resulted in:

\$71,270 in rebates.

460,454 kWh in energy savings.

Reduced energy generation equivalent to 4.9 million pounds of carbon eliminated.

Carbon offset equivalent to 4,847 trees planted.

Reduced energy generation equivalent to 1.2 million gallons of water saved.

Saving energy starts here

Improve indoor air quality when you upgrade your HVAC equipment with advanced rooftop controls. The ARC pilot provides eligible K-12 schools and select nonprofits a rebate for installing eligible equipment including variable speed drives, outdoor air economizers and energy management systems.
